PROFESSIONAL SUMMARY

Lead Full Stack Engineer with 7+ years shipping production SaaS, fintech, marketplace, and investment platforms — owning delivery end-to-end from architecture through deployment and support. Helped commercialize CodeCanyon products with 5,000+ reported sales across fintech, marketplace, and investment use cases, integrating 30+ payment gateways along the way. Leads engineering teams, architects scalable software systems, mentors developers, and partners directly with international stakeholders to deliver production-ready solutions from concept through deployment.

PROFESSIONAL HIGHLIGHTS

- 7+ years of full-stack engineering experience, including 4+ years in a lead engineering role.
- Delivered 12+ commercial SaaS, fintech, marketplace, and investment platforms from architecture through production.
- Integrated and maintained 30+ international payment gateways across fintech and marketplace platforms.
- Applies AI-assisted engineering workflows (Claude Code, Cursor, Copilot, ChatGPT) for architecture exploration, code review, and debugging — without ceding oversight on security-critical code.
- Led and mentored junior and mid-level engineers through architecture guidance, code review, and delivery oversight.
- Helped commercialize products generating 5,000+ reported CodeCanyon sales.
- Built scalable real-time systems using WebSockets, Redis, and event-driven architectures.
- Owns the full delivery lifecycle: requirements, architecture, development, deployment, and production support.

PROFESSIONAL EXPERIENCE

Lead Software Engineer

Jan 2022 – Jul 2026

The Soft King — Dhaka, Bangladesh

- Own full delivery lifecycle — client discovery, architecture, implementation, deployment, and production support — for SaaS, fintech, marketplace, and investment products built on Laravel, React, Next.js, Node.js, MySQL/PostgreSQL, and AWS.
- Lead and mentor a team of junior/mid-level engineers through architecture guidance, code review, and delivery oversight, improving code quality and cutting recurring production issues.
- Architect scalable systems using modular monolith patterns, queues, caching (Redis), and event-driven workflows; design for high availability with load balancing and stateless services.
- Integrated and maintain 30+ international payment gateways, plus KYC, 2FA, social login, and multi-language support, expanding product reach into new markets.
- Built real-time chat, live notifications, and audio/video calling features using WebSockets across multiple commercial products.
- Use AI-assisted engineering (Claude Code, Cursor, Copilot) for architecture exploration, code review, debugging, and documentation — cutting typical feature turnaround time while retaining full engineering oversight on security- and data-critical code.
- Translate international client requirements into technical scope, architecture decisions, and delivery milestones; manage sprint planning and release coordination.

Software Developer — Laravel & PHP

Feb 2021 – Dec 2021

Uttara InfoTech — Dhaka, Bangladesh

- Built and deployed client web applications end-to-end using Laravel, PHP, MySQL, and REST APIs, converting business requirements directly into technical scope.
- Integrated third-party APIs, payment gateways, and SMS/email services to automate transactions and customer communication.
- Improved application performance through query optimization, indexing, and caching; reduced production defects through structured testing and release verification.
